The Fastest School In Staffordshire!

Contingency Networks Delivers Next-Generation Connectivity to King Edward VI School

Staffordshire, UK – King Edward VI School in Stafford has taken a significant leap forward in future-proofing its internet connectivity, thanks to a new partnership with local Internet Service Provider, Contingency Networks.

Historically, like many educational institutions, the school had relied on traditional educational providers for internet services—often at a premium cost, coupled with inflexible and lengthy contract terms. Seeking a more robust, cost-effective solution, the school turned to Contingency Networks.

Contingency Networks has successfully implemented a cutting-edge 25Gb/s fibre connection, with the addition of microwave resilience, ensuring that the school benefits from unparalleled speed and reliability. This high-capacity solution is designed to meet the growing demands of the curriculum, both now and in the future, and is backed by a 100% Service Level Agreement. The dual-technology approach guarantees that the school remains online, without exception.

“We’re proud to support King Edward VI School and other local schools by providing market-leading connectivity solutions,” said Jon Richardson, Managing Director of Contingency Networks. “Our goal is to eliminate the barriers of poor connectivity that many schools face, particularly in suburban and rural areas. We believe that every educational institution should have access to the same high-performance internet as their urban counterparts.”

Headteacher Jason Christey of King Edward VI School expressed his satisfaction with the new service: “The difference in our connectivity has been nothing short of transformational. Contingency Networks guided us through the entire process, from solution design to procurement and delivery. Their project management and service delivery has exceeded our expectations.”

Contingency Networks offers connectivity solutions for schools, educational institutions, and organizations across the public and private sectors throughout the UK. With connections up to 400Gb/s and a focus on high availability, we ensure 100% service reliability for a range of technology solutions.
